

list

1. list在遍历时可能出现以下情况

```
if (StringUtils.isNotEmpty(paginationVo.getUserName()) && CollectionUtils.isNotEmpty(teacherListVos)) {  
    for (TeacherListVo teacherListVo : teacherListVos) {  
        if (teacherListVo.getTeacherType().equals(TeacherType.PART_TIME_TEACHER.getCode()) &&  
teacherListVo.getUserName().contains(paginationVo.getUserName()) &&  
!teacherListVo.getAliasName().contains(paginationVo.getUserName())) {  
            teacherListVos.remove(teacherListVo);  
            //如果剔除之后不跳出, 则for会报空指针  
            if (CollectionUtils.isEmpty(teacherListVos)) {  
                break;  
            }  
        }  
    }  
}
```

当遍历该集合时, 在循环中如果将正在循环的集合remove其元素则有可能出现空指针(当remove掉最后一个元素时,)
